

## INFLATION CALCULATION METHODOLOGY NOTE

The National Statistics Office of Georgia has been producing the Consumer Price Index (CPI) since 1992. The CPI measures an overall change in the level of consumer prices within the country.

Consumer prices are registered from the 10th to the 20th day of each month in six cities (Tbilisi, Kutaisi, Batumi, Gori, Telavi and Zugdidi) at more than 1800 retail outlets.

The CPI includes 12 commodity groups, in line with the international classification (COICOP). Aggregate indices are calculated for each commodity group from individual indices for each city as well as for the whole country. The official release date of the CPI is the 3rd day of each month. The data is disseminated through the Geostat website. Indices with 4 different base periods are published: compared to the previous month, compared to the corresponding month of the previous year, 12 month average over the previous 12 month average and compared to the long term base period. Besides, core inflation rate is published.

Consumer basket represents the basis for CPI calculation. It contains goods and services most frequently consumed by an average consumer. The consumer basket is identical for the six cities. The consumer basket for 2025 is based on the consumption structure derived from the national accounts data and integrated household survey results, reflecting the latest expenditure pattern. Using the national accounts information as a main source of the consumer basket weights is one of the main recommendations given to the EU member countries by the Eurostat in the field of price statistics.

At present the consumer basket contains 305 goods and services. Weights are assigned to each of them based on the respective shares in the overall consumption. Starting from 2012 the consumer basket is updated on an annual basis.
